Selecting a
Sink

1 MATERIAL **2** TYPE **3** SIZE **4** STYLE **5** FEATURES

Material

STAINLESS STEEL: Stainless Steel is a timeless material which remains a popular choice. It is often a perfect match to the kitchen appliances so provides a coordinated finishing touch. As well as the aesthetics, it is easy to maintain and is extremely durable. All Abode sinks are constructed from premium 304 grade stainless steel and are available in an array of designs.

GRANITE: SiOForm® is a unique material solution engineered specially for our granite kitchen sink collection. The material is primarily made of pure and natural quartz, a material that is strong, resilient and extremely durable, making it an ideal addition for your kitchen. SiOForm® products have a uniform void-free structure and are resistant to dry temperatures up to 280°. Granite sinks are great for retaining water temperature, making it perfect for any busy kitchen environment. Our range consists of several unique designs in various shapes and sizes. Additionally, the Frost White, Grey Metallic and Black Metallic options add a premium and contemporary touch and create a striking focal point in your kitchen.

SiOForm® is available in the following colours:

CERAMIC: Our ceramic sinks are constructed from the finest grade fireclay and are hand finished for a premium quality finish. This traditional classic is available in undermount, apron front and inset options, providing an elegant finish every time. The glazing process ensures a long lasting and durable finish.

Sink
types

UNDERMOUNT: An undermount sink is installed under the worktop for a seamless, premium finish. Undermount sinks will work with a wide variety of worktop surfaces. Why not try pairing yours with a solid surface or granite worktop? There are a large range of bowl sizes and configurations to choose from in this offer, providing ultimate versatility when it comes to usage requirements. The tap is often mounted on the worktop, adding to the premium, sleek look.

APRON FRONT: This range consists of our Belfast and Provincial products. They are installed under the worktop with the front face visible so require a base cabinet with a specific height to house them. Traditionally these products are ceramic, for a more contemporary/industrial style, opt for the stainless steel Belfast.

INSET: An inset sink sits on top of the worktop and can be installed in any material, including laminate. An inset sink will often have a drainer integrated for ease and durable functionality.
The tap is usually mounted on the sink and often these designs have two tap holes so they are reversible, meaning the drainer can be positioned either left or right.

Sink
sizes

Across our comprehensive sink collection, we have several sink sizes available. In the initial planning stages, it is important to consider how the kitchen is to be used to determine which option is best suited to your lifestyle requirements.

How do you use your sink? What would make your daily tasks easier so you can focus on the more important things? for example; what typically needs to fit in the main bowl? Is a larger main bowl size needed? Would the addition of a half bowl be beneficial? Is a drainer required?

EXAMPLES ARE AS FOLLOWS;

Single Half Bowl

Single Bowl

1.5 Bowl

Double Bowl

Large & Extra Large Bowl options

Style

The overall style of the kitchen will go a way to dictate the perfect sink and tap pairing. Bring colour into the kitchen with a granite sink and either a perfectly matched or contrasting tap pairing.

For example; an industrial style kitchen with dark colourways looks great with a stainless steel or granite sink plus a perfectly matched tap in stainless steel, black, or graphite. However, consider the finer details such as the handles or any key detailing on appliances/ accessories in the kitchen when selecting the perfect tap finish, it may be that a brass or copper tone is more suited to complement the kitchen overall.

Sink features

LOOK OUT FOR THE FOLLOWING FEATURES ON SELECTED SINK RANGES

FLUSH PLATE OVERFLOW

This removable overflow cover has the following benefits;

Removable for improved sink hygiene (easy clean)

Provides a sleek, premium finish

Constructed from solid stainless steel

STAINLESS STEEL UNDERMOUNTS

Understated simplicity

It's not just the material that's versatile but the range of products in this offer.

We're confident you'll find the perfect solution from our stainless steel undermount collection. Whether you're looking for a small single bowl, one and a half bowl, large bowl or even an extra large bowl!

We also have ranges which allow you to create the undermount look without the expense of solid surface. Take a look at our R15 range which can be either undermounted or inset so worktop material doesn't restrict you from creating the look you desire.

STUDIO COMPACT

The Studio was designed for compact kitchens and grander installations alike. In smaller kitchens maximise worktop space thanks to Studio's compact yet functional proportions, or install as a practical preparation sink, ideally suited for steaming hot water taps. Three accessories are supplied with the Studio sink, adding useful functionality where space is limited.

Single bowl

Two installation options available:

600mm cabinet requirement in horizontal mounting position (450mm in vertical)

Low profile inset or undermount installation

1mm 304 grade brushed stainless steel

Small radius bowl corners for contemporary style with effortless cleaning

Orbit waste with easy empty, fold-back basket and pipework included

Flush-plate overflow for a sleek contemporary look

AW5134
Stainless Steel

length 500mm
width 300mm
depth 205mm
bowl 1 capacity 16.9L
min base unit 450mm (vertical mounting)
600mm (horizontal mounting)

Comes complete with
3 practical accessories; strainer, colander and mini bowl in the pack

Full specification documents can be found at **www.abodedesigns.co.uk**

WASTES AND OVERFLOWS

(MATT BLACK)

NEW

Stylish, slick, and streamlined. The Abode collection of Matt Black wastes and overflows are perfect for adding a touch of modern-day minimalism to your kitchen. A collection that pairs wonderfully with our Matt Black tap range, blends beautifully with our granite sink range and also provides a sharp, striking contrast with our stainless-steel sinks.

Manual basket strainer waste

Tap performance

To ensure you achieve the best possible performance from your chosen tap, you need to be able to identify the existing plumbing system in place and therefore estimate the water pressure.

The following information provides a general overview on water pressure, however we do recommend that a plumber checks your water pressure with a pressure gauge.

Lower Pressure (gravity fed / vented system)

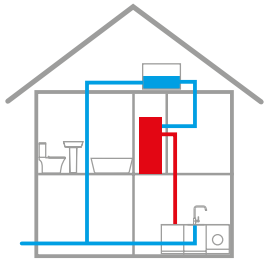

You have a cold water tank in the loft space and a hot water tank in the airing cupboard

You don't have an additional pump which is activated when you turn on any hot tap

The amount of hot water available to you is limited

With a gravity fed system you can approximate your hot water pressure by dividing the vertical distance (A) in metres by 10 (e.g. 3m = 0.3 Bar)

You should choose taps which are suitable for use with a lower pressure system

High Pressure (pumped gravity fed system)

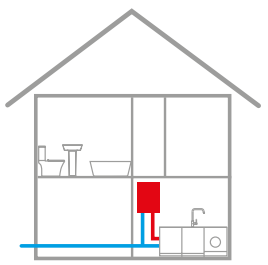

You have a cold water tank in the loft and a hot water cylinder in the airing cupboard

You have an additional pump (normally located near the hot water cylinder) which is automatically activated when you turn on any hot tap

The pressure is defined by the pump. See pump manufacturer's details.

You should be free to choose from most of our tap range

The amount of hot water available is limited

High Pressure (combi boiler)

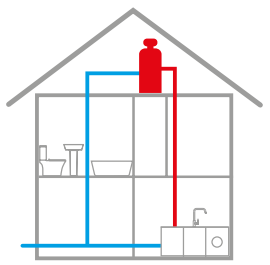

You have a boiler but no separate hot water storage cylinder

The boiler is typically found in the kitchen

Hot water is delivered instantly and on demand

This system is typically delivers the hot water between 1 and 1.5 bar

You should be free to choose from most of our tap range

High Pressure (unventilated system)

Most commonly referred to as a "Megaflo" or similar brand

You have a hot water cylinder directly connected to the cold water supply. Above the cylinder could be an expansion vessel. (The hot water cylinder is typically in the loft space)

You do not have a cold water tank

The hot and cold water pressure is typically around 3 bar

The amount of hot water available is limited

You should be free to choose from any of our taps

WATER AERATION

All mixers use spout aerators or flow straighteners to add bubbles to the water. These innovations in fluid technology keep your water flow in a controlled and distinctive pattern and eliminates splash back.

VALVE CARTRIDGES

Abode use ceramic disc valves in all of our tap designs. These are tested for over 200,000 cycles before we will pass them for use within our taps. Why? Well this means that under normal use conditions your tap valves have proven that they will work for many years to come. The kitchen tap is the most used appliance in the kitchen, so valve quality assurance is essential.

TESTING

Abode products are designed specifically for the UK by our team of in-house designers. We use artisan hand polishing techniques, sophisticated plating and powder coating processes to ensure a blemish free surface, along with robotic production of parts for precision. Every Abode product is 100% end of line tested before it leaves the factory, giving you absolute peace of mind.

EVERYTHING IN ONE BOX

After taking all this care with the product, we want to ensure they reach you in perfect condition with all the parts that you will need for a seamless and straightforward installation. Fixing kits and tail pipes (with non return valves where necessary) are provided. If the tap is heavy or tall, we also provide you with a tap stabilisation bracket in the box. We try and think of everything so you don't have to.

Throughout this section you will see the following symbols next to products where relevant:

0.4 MINIMUM BAR PRESSURE

180° SWIVEL SPOUT

120° SWIVEL SPOUT

PRONTEAU™ by abode

STEAMING HOT WATER TAPS

Useful technology is fast becoming the norm in the modern kitchen, with hot water taps being firmly among their number. Many of us increasingly look for additional functionality from the kitchen tap as we would from an appliance. Steaming hot water taps fulfill a need and we'll put your mind at ease about any safety concerns across the following pages, a steaming hot water tap is safer than a kettle in many ways.

Scan to view Pronteau by Abode Price List

Why should I choose a PRONTEAU™ by abode Steaming Hot Water Tap?

1/ SAVE TIME

Adding a Pronteau to the kitchen is guaranteed to make a difference and leave you thinking how you got by without a steaming hot water tap.

Some of the benefits to note are;

- Instant hot drinks
- Speed up cooking tasks such as pan filling for vegetables, pasta or rice cooking
- Instant porridge or noodles
- Speeding up cleaning tasks such as pan and dish rinsing

2/ DO YOUR BIT FOR THE ENVIRONMENT

By switching to filtered water from the tap in comparison to buying bottled mineral water you will save money as well as aiding the reduction of plastic waste.

Our 4 IN 1 ranges have it all, domestic hot & cold water, filtered steaming hot water and filtered cold water.

All Pronteau filters are part of a **FREE filter recycle scheme**.

3/ STREAMLINE THE KITCHEN

Free up worktop and fridge space of kettles and filter jugs for clutter-free worktops and that extra fridge space that we often find ourselves needing.

4/ SERVICE ON HAND

We have an in-house Pronteau specialist service team and engineer fleet on the road.

5/ REDUCE WATER WASTAGE

As there is no need to fill the kettle every time a hot drink is made or a pan is to be filled, you will find that water and energy wastage in the household is reduced.

6/ IMPROVE THE TASTE OF HOT DRINKS WHILST PROTECTING YOUR BOILER

All Pronteau products are supplied with a filter. This filter has an important role as it maintains the long-term health of your boiler, preventing excessive limescale build up.

Secondly, achieve great tasting hot drinks every time as the filter will improve the taste of your water and prevent the scum that you sometimes find on hot drinks.

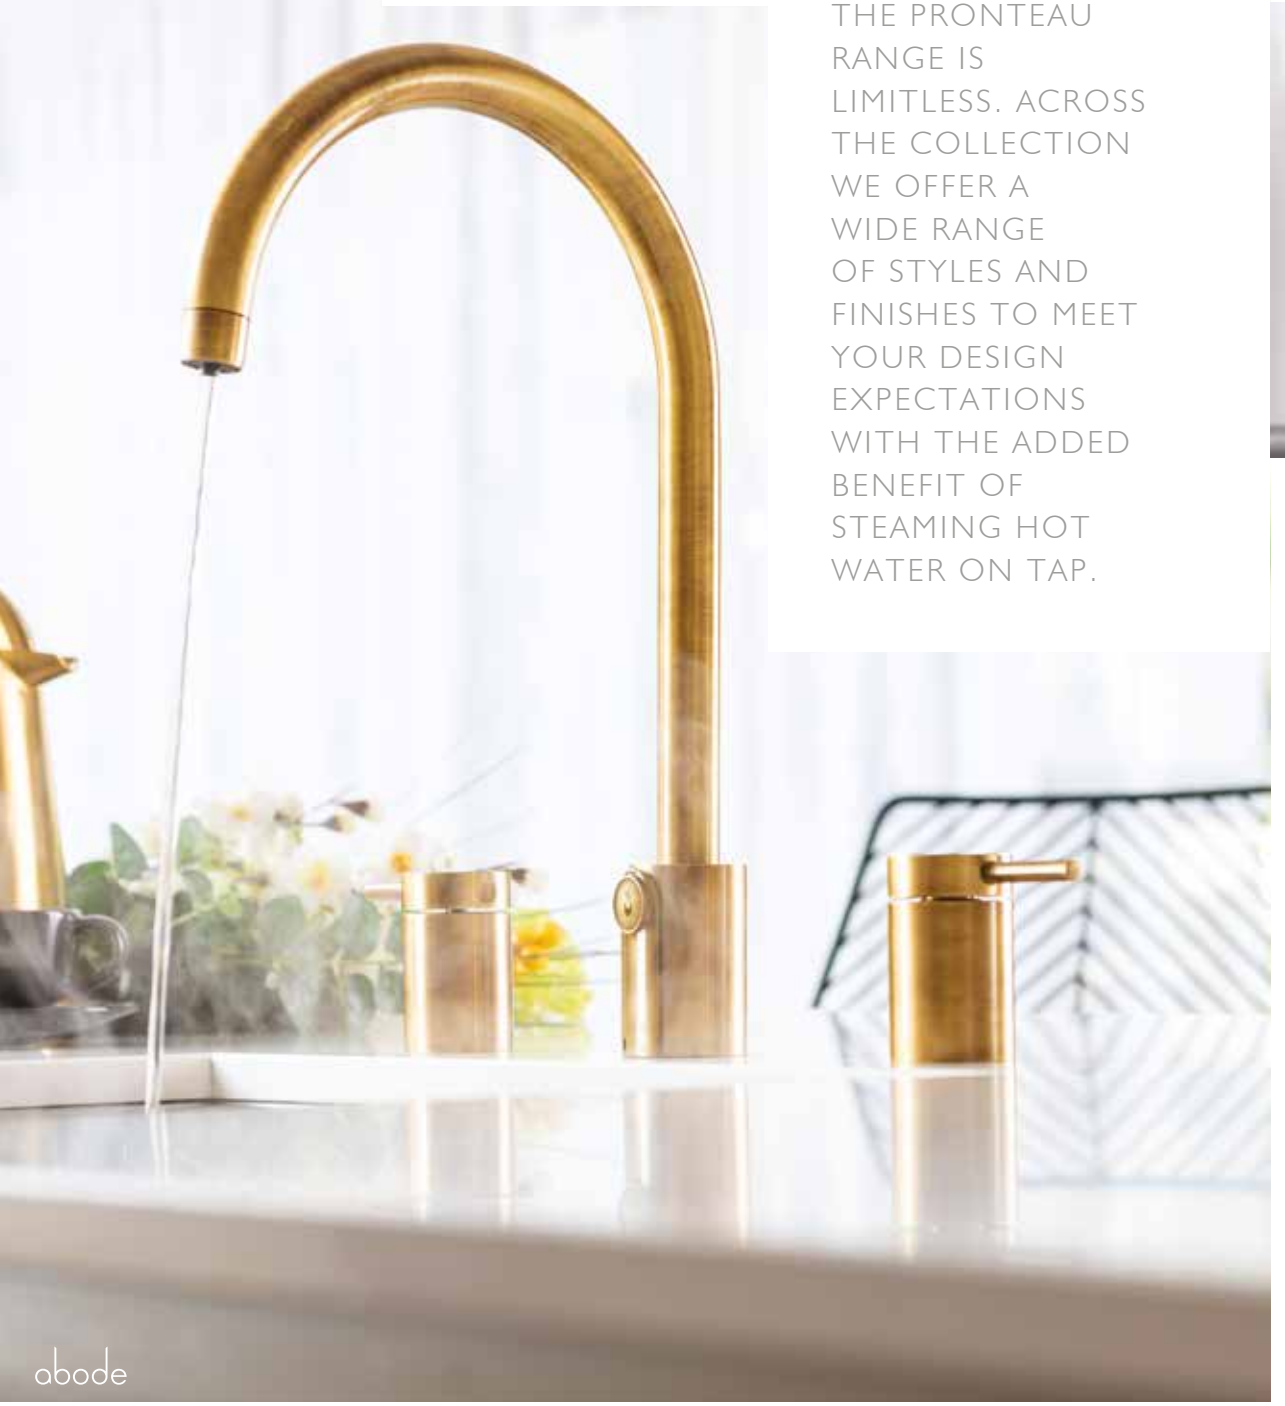

7/ NEVER WORRY ABOUT SAFETY

Our products have been designed with safety in-mind. Our patented HotKey® range is considered by many as the safest hot tap option as the HotKey® can be stored out of reach of children when not in use. The ProBoil.2X collection have a two-stage handle to dispense the steaming hot water, push the handle down or slide it across and turn the handle to safely dispense the water.

8/ COMPACT BOILER SIZE

Our boilers pack in functionality but remain compact in size, so much so that they fit in a Belfast cabinet with ease.

Choosing the right
Hot Water Tap for you

THE PRONTEAU RANGE IS LIMITLESS. ACROSS THE COLLECTION WE OFFER A WIDE RANGE OF STYLES AND FINISHES TO MEET YOUR DESIGN EXPECTATIONS WITH THE ADDED BENEFIT OF STEAMING HOT WATER ON TAP.

FUNCTIONS

3 IN 1

domestic cold, domestic hot and filtered steaming hot water

4 IN 1

domestic cold, domestic hot, filtered cold and filtered steaming hot water

Why 98 degrees?

When we developed our innovative range of steaming hot water taps for launch in 2016 we took into consideration every aspect of safety, not only for the dispensing of the steaming hot water but also the maximum temperature requirements for the stored water in the boiler. This is the main reason our products store water to a maximum temperature of 98°C, this makes our product fully compliant with Part G(3) of the UK Building Regulations, and all Pronteau taps, boilers and filters are WRAS approved or WRAS pending.

STYLE

A variety of models, styles, popular finishes and boiler sizes allow you to tailor your experience of Pronteau hot water taps to ensure you get the right model for your household.

We have most recently launched our Slimline Prothia 3 IN 1 hot taps that will look perfect in every home. Not only that, our latest 4 IN 1 mechanical range, Propure offer hot and cold domestic supply along with filtered steaming hot and filtered cold drinking water.

Professional style

Available in the 3 IN 1 range. The steaming hot water is dispensed from an outlet in the crossbar. Also features a pull around with spray function for the domestic hot and cold supply.

The Boilers

All two-stage Pronteau taps across pages 104 to 125 include the Proboil.2X boiler which has a 2L tank capacity.

All Pronteau HotKey® taps across pages 134 to 145 include the Proboil.4E boiler which has a 4L tank capacity.

Both boilers have the following features:

Controllable temperature range which can be set between 75 & 98° via the on screen digital controls

Compact stainless steel tank which fits beneath a Belfast or Butler sink

Simple to install via colour coded connectors

Filter life indicator

WRAS approved

NATIONAL TEAM OF OVER 30 SERVICE ENGINEERS ACROSS THE UK SHOULD YOU NEED US

All Pronteau boilers are protected by our Proboil filters (supplied with all system product purchases). These filters are essential to ensure protection of your boiler from scale build up as well as reducing water hardness out of the tap to improve taste and clarity of hot drinks.

Please visit www.pronteau.co.uk for more information on Proboil maintenance.

INDUSTRIAL STYLE TAPS

Add soft industrial touches and texture to your kitchen design with the Hex and Fraction families. Our industrial taps offer will coordinate effortlessly with any kitchen featuring industrial style elements or add interest and edge to a kitchen design featuring traditional elements.

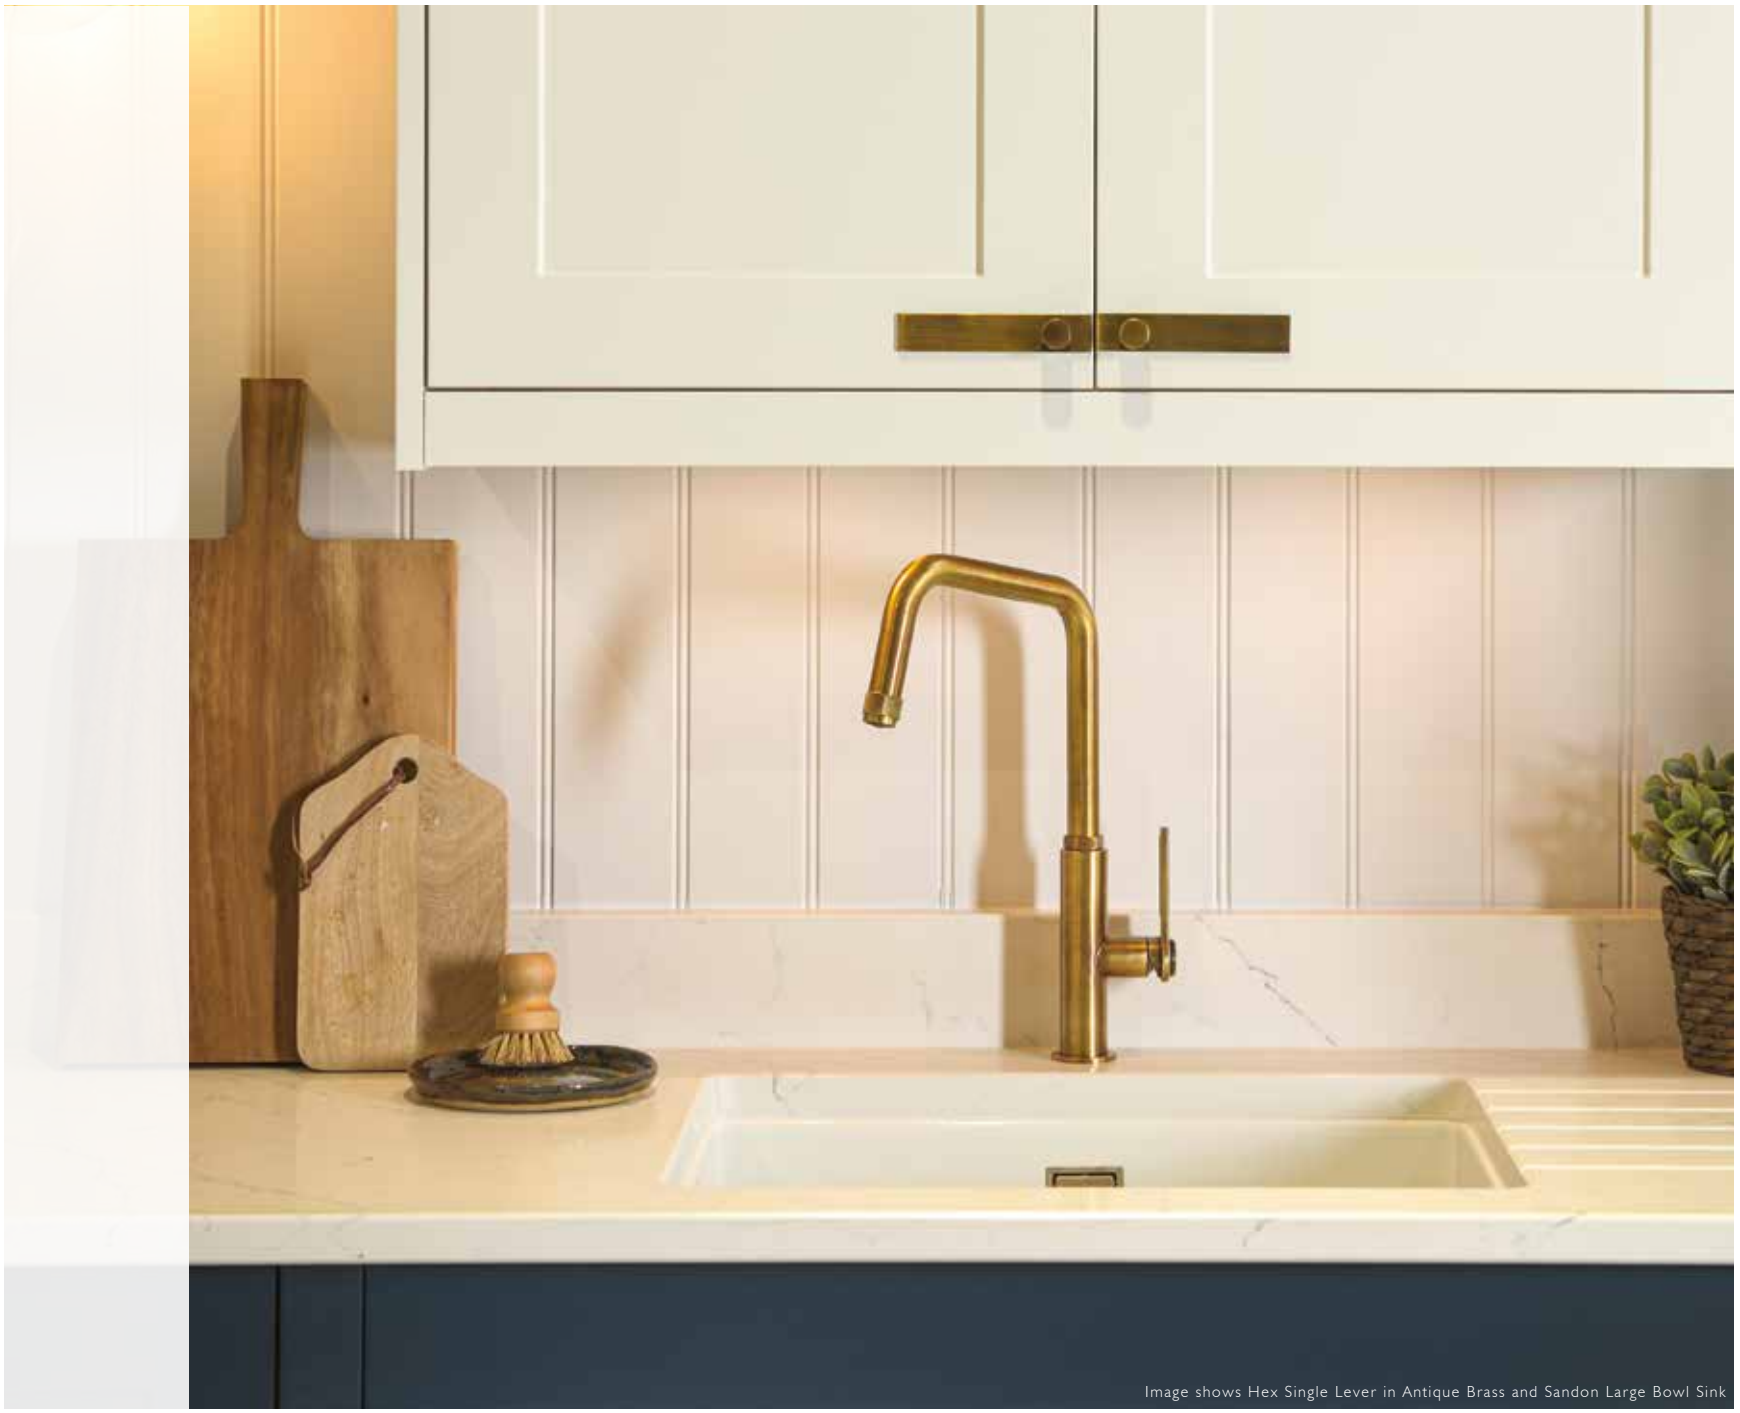

Image shows Hex Single Lever in Antique Brass and Sandon Large Bowl Sink

/ THE

INDUSTRIAL TREND

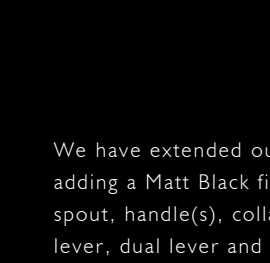

CONTINUES TO THRIVE!

We have extended our award winning Hex range by adding a Matt Black finish with brass accents on the spout, handle(s), collar and base plinth to the single lever, dual lever and pull out Hex collections.

Designed to challenge traditional concepts and make the ultimate statement, with distinctive features, the Hex range will coordinate effortlessly with any kitchen featuring industrial style elements and also add interest and edge to a kitchen design featuring traditional elements.

We have strengthened our industrial taps offer further by adding the Fraction collection. A unique L-spout design with cog style detailing on the handle to give a more subtle industrial injection. This collection includes; a single lever, pull out and professional option.

Choose from an array of finishes across this collection for the perfect finishing touch.

PULL OUT & PROFESSIONAL TAPS

If you have the water pressure capability, a pull-out tap should not be overlooked. The cost may be slightly more up-front than a standard tap but the benefits over time will more than justify this.

The addition of a pull-out tap to the kitchen will make daily tasks such as pan filling, dish rinsing, food preparation and sink bowl cleaning that much simpler. Ideal for the keen cook or busy family household.

The range consists of two different types of pull out tap; a true pull out and a pull around tap. On a true pull out, the hose is discreetly hidden inside the tap and allows the user to pull the hose out to its full set length. A pull around tends to be a professional style tap in which the hose is visible on the external of the tap and held in a handspray holder located on the end of the extension bar.

In this range you'll find some products with an additional spray function which is operated by pressing a button on the end of the spout. This button simply changes the flow of the water from the standard to a powerful spray.

Our range of professional taps offer the manoeuvrability and features detailed above whilst being a statement piece in the kitchen.

Image shows the Genio Semi-Professional Monobloc pull around in Matt Black

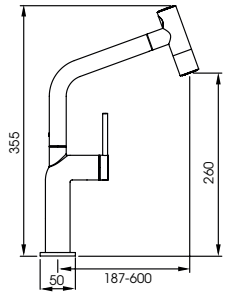

See our stainless steel range for pull out and professional taps constructed from solid stainless steel.

Building on the success of the Tubist collection this uniquely styled tap adds an intuitive, ergonomic spray functionality in addition to the normal aerated water flow. Ideally suited to those looking for improved practicality without compromising on style, the Tubist T will be as easy in the hand as it is on the eye.

Tubist T
Pull Out Spray

STAINLESS STEEL TAPS

Stainless steel as a material has several well loved benefits including:

It is a closer match to stainless steel sinks and appliances

The material itself is 100% recyclable

Stainless steel taps have no coating, they are just polished and brushed

It is more durable and less likely to scratch, small scratches can be brushed out

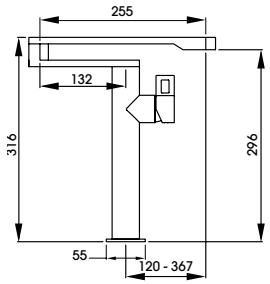

Stainless steel is a naturally hygienic material

AQUIFIER™ WATER FILTER TAPS

The Abode Aquifier range features popular designs from our tap range as well as exclusive designs with the added benefit of a dedicated filtered water function – straight from the tap.

Image shows the Belfast and Atlas Aquifier in Matt Black

WHAT ARE THE BENEFITS OF A WATER FILTER TAP?

WATER QUALITY: An Aquifier tap or Swich device filters particulates from water, reduces the taste and odour of chlorine and reduces hardness from the water.

HEALTH: Having filtered cold water on tap will hopefully encourage the consumption of more water. Fill a reusable water bottle each day directly from the tap.

ENVIRONMENT: By removing the need for bottled mineral water, every home with an Aquifier product is doing their bit for the environment by reducing single use plastic consumption.

COST: If bottled mineral water is a frequent purchase in your household you can save considerable amounts each year by switching to an Aquifier or Swich product.

SPACE SAVING: If you previously had a water filtration jug or bought bottled water, just think how much space you can free up in the fridge.

APPLIANCE HEALTH: If you live in an area with particularly hard water you will notice that the kettle suffers as a result of the limescale build up over time. Fill your kettle with filtered water and prolong its life.

Find out more on the website: **https://www.abodedesigns.co.uk/faqs/aquifier**

HOW DOES AN AQUIFIER PRODUCT WORK?

WHY IS IT IMPORTANT TO KEEP UP WITH REPLACEMENT FILTERS?

It is simple to maintain your filter, it sits in a bracket either at the back or on the side of the inside of the base cabinet below the sink. It is easy for anyone to replace using our simple, fast and secure 'SafeLock' system.

We offer a dedicated filter reminder service – we'll send you a reminder by email or post each time your filter is due for renewal.

Filters are easy to buy as singles or packs from **www.abode-shop.co.uk** when the time comes to replace.

It's important to change the filter at the recommended intervals to ensure the consistency of the supply of fresh, filtered drinking water.

USAGE: The capacity of the filter units for Aquifier and Swich products vary, these range between 1000L and 6000L (dependent on incoming water quality and usage).

We have both Classic and High Resin filters available, specifically tailored for use in soft water or hard water areas respectively.

If you live in a soft water area the filter will be used up much slower than one in a hard water area (based on a standard average usage).

We recommend that our filters are changed every 6 months on average. If you live in a hard water area or have a higher filtered water consumption, replacements every 3 months may be beneficial.

RECYCLE SCHEME AVAILABLE

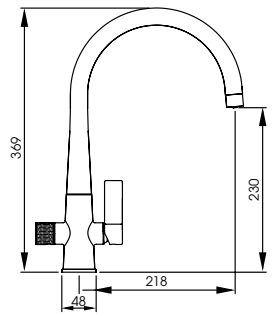

The Safelock high resin filter is included as part of the FREE Abode filter recycle scheme.

NEW

Naturalé
Aquifier

AT2195-F5
Chrome

A tap with a conscience, one that is maximal on style and minimal on impact. The Naturalé has been designed and developed by Abode to be our most sustainable tap.

Designed with a FSC approved Beech wood approved handle which, with a simple twist gives you access to crystal clear filtered water, helping you become part of the solution to plastic pollution.

Supplied with a filter that is part of our filter recycle scheme. Doing our bit, to help you do your bit.

The unique, teardrop lever controls your domestic water with a cold start valve, helping to reduce energy wastage.

Introducing swich

PATENTED · PATENTED · PA

A revolution in filtered water technology

HOW DOES A SWICH PRODUCT WORK?

Convert **ANY** kitchen tap to one which delivers filtered water as well as the standard cold water supply

The easy way to get filtered water from any style of tap

Simple to install either through the worktop, or any standard sink 35mm tap hole or even in the sink cabinet

Easy to use, just turn to divert to the filtered water function and back again to the standard cold water supply

Can be installed alongside a new tap or retro-fit with an existing tap

Award winning, unique product design

WARRANTY

COMPREHENSIVE WARRANTY

In the unlikely event that you should experience any defect in the materials or workmanship of your new

- Abode sink within 10 years of purchase

- Abode tap within 5 years of purchase

- ProBoil boiler within 2 years of purchase

The purchaser's sole remedy shall be the replacement (at the manufacturer's discretion) of all or any part of the product that is defective.

For the tap, all working parts and valves are guaranteed for a period of 5 years from date of purchase. Decorative surface finishes and O-rings are guaranteed for 1 year from the date of purchase provided that our advice concerning care has been observed and no scouring agents have been used.

This is provided that the sink, mixer or tap has been used for normal domestic purposes and that the care, installation and maintenance instructions have been observed. The warranty extends to the original purchaser only.

CUSTOMER CARE

CAUTION

Repeated release of boiling hot water directly into coloured sinks can in extreme cases cause crazing and even cracking. Therefore we recommend great care is taken not to release the water directly on to the sink surface at full temperature for extended periods.

WATER REGULATIONS

All products should be installed in accordance with Local Water Bye Laws.

Visit **www.abodedesigns.co.uk** to search all products with a current WRAS approval.

Our ProBoil boilers store water at a maximum temperature of 98°C to conform to UK legislative limits. Spout exit temperatures will vary according to environmental changes and usage patterns.

TECHNICAL SUPPORT

Choosing the right mixer tap and sink for your home is an important choice as the tap is not only the most architectural item in your kitchen, but also the most used.

Think about the style you require, the ease of use you are looking for, and then consider your existing water supply and the water pressure available to you. If you have any questions with regards to whether a tap will be suitable for your application, please contact our technical support team or visit our website www.abodedesigns.co.uk for more details.

For sinks, consider the material and colour you prefer, the uses of the sink, the number and bowl sizes, the type of worktop material you propose to use and the base unit space available to install within.

Your long-term satisfaction with the product is important to us. In the event that you require spare parts for your Abode product, please contact our technical support team or visit our web site for further technical information.

Scan to visit our YouTube channel for support videos.

THE SMALL PRINT

Abode is a division of Norcros Group (Holdings) Limited.

Abode, Distinctly, More is Less, Aquifier, Proboil and Pronteau are registered trademarks of Abode.

Errors and omissions excepted.

Our policy is to continually improve and develop our products, and accordingly we reserve the right to amend specifications, particulars of weights, measures, prices, dimensions, finish and colour availability without prior notice.

For pricing please refer to our separate price list or company website. All prices displayed include VAT at 20% and are the manufacturers' recommended prices only.
